UNLIMITED KNOWLEDGE ACCESS SYSTEM

"My dream and vision is to invent freedom on all levels, not just for myself but for any human being; and I will not stop until it is reality" ~c

VISION

To give everyone access to and a choice to build a basic foundation for sustainability and survival on their terms that doesn't require constant dependency in others or something other then themselves as a conscious unlimited being of endless potential. I am sure the solution for this is unlimited access to the knowledge that this planet, this universe, this galaxy and other influential factors, your fellow humans and everything in creation that we experience with our senses unlimited can inspire us with. The solution is not to tell them what to think since that is very limiting and also very wrong when the student knows of a better way for his learning to be obtained then the master does. The master is only to guide and share of his experiences but not to dictate to the student what to think or do, only give the student the tools to create something out of inspiration and that way the student can obtain the knowledge most efficiently in unlimited amount and on unlimited time until his time in this life is over. I believe our true purpose for our potential that makes us unique is to be inspired by the current creation, find a passion for our human potential to thrive with and then inspire others again by manifesting it into reality like a fractal that is constantly evolving. Knowledge is easiest obtained through play and the desire to learn from a wide varied span of subjects out of free will choices. We are all different which is not a bad thing for the whole it's actually a good thing because then what is created as a whole will benefit us all, and thus we cannot be treated alike since we are all on different stages of learning and we have different interests, that changes over time as we move onto new desires. Questions are the answer, because it will lead you to knowledge through experience.

"Unlimited knowledge is freedom, because it liberates you from dependency" ~c

"Give a man a fish and you feed him for a day. Teach a man how to fish and you feed him for a lifetime."

~Lao Tzu

PROBLEMS WITH THE ESTABLISHED EDUCATION SYSTEM

First of it is limited and it's expensive to run. It is also built on the wrong intentions only to gain the elite in the long run and create loyal servant workers dependent on their system for survival to keep the current of benefits flowing in the elite's direction and not to be fairly shared with the whole. There has to be a fair exchange and reward system that benefits everyone, the system cannot be run by fear and control to give power to a few self selected humans. The people of this earth alone has never had their own system built for them, it has always been built to gain the top chain to maintain control. I don't believe in deceiving people by telling them lies and scaring them into submission to maintain control, I believe in a fair agreement on terms that will benefit both parties involved will be a better way of keeping the balance and the flow. Nature works in harmony, balance and flow it has no need to keep static control it can improvise and make things flow in a dynamic way, as should we humans be but then we need to use our creative potential and learn by doing and grow at our own speed, not by how we are told in a controlled manner, from anyone who bases others experience on theory without having walked in their shoes so to speak.

"Kill the competition, promote & create vitality; everybody wins" ~mc

SOLUTIONS FOR A NEW EDUCATION SYSTEM

I have solutions for how to make knowledge accessible via the world wide internet. By creating a online software tool that cannot fall into the wrong hands because it will be licensed as a open source education tool for anyone to download and set up their own online school. It will also be connected as nodes around the internet so that everyone who host their own version of the software share the global library and the list of hosts links and service list and more. By making this possible there wouldn't be any fear of the ownership falling into the elite's hands where every invention humankind has ever created always ends up, and we only get to benefit from a fraction of what we have created. Don't worry the business that you can't get from licensing the software will be gained through using it. It's like designing a hammer to build a house you don't patent the hammer so no one else can use the hammer unless they pay a license, but you make value and get rewarded from using the system as a tool to distribute knowledge freely and unlimited to any mind out there ready to gain the knowledge you are sharing in fair exchange for your time and value in knowledge. And by setting up a virtual school foundation, it is possible for anyone who wish to teach freelance to use this tool and become available for the students that are in need of this knowledge worldwide without restrictions or high cost demands to stay in business. The rating of the knowledge shared will be done by the students themselves when they complete the classes so that new students will get a more informed view before choosing teacher to gain the knowledge from. The users will be the peers that review the quality of the knowledge distributed from experience not by theory.

"You can't beat the system by playing by their rules, because they will change the rules; but you can create a better system and make their system obsolete" ~c

THE BUSINESS

Anyone can start teaching as long as they have something to teach and share, the student or their parents choose their own teachers and class based on their interests and passions. The software will provide a virtual school management system so you can focus mostly on what your business is about which is teaching, and this way you don't need a bunch of extra workers that cost a lot to have hired to keep your business alive also structure and buildings and a bunch of copies of books and libraries. It is only possible to give certificates or grades in the knowledge you know and have gained as a proof testimony for the students to refer to your school or to you as a teacher, and then based on that rating is done by the whole of students that has taken the classes. Some features in the software we might attach a monthly subscription fee to use the extra feature for the bigger schools to simplifying things and to be able to give something back to the software builders so they can keep developing the software.

"Think global, act local"

"When the student is ready the master appears"

THE CLASSES AND METODS OF SHARING THE KNOWLEDGE

It has to be easy and cost efficient for the teacher and the student to meet in sharing and obtaining this knowledge, and the way to do it is by today's tech on the internet where information can be stored in video, sound, writing formats where it can be either distributed live via live streaming video, via direct communication via sound or via direct communication by writing or chatting. Also a combination of these at the same view is also possible. And then the knowledge is recorded and stored in archives and can be reviewed at a later time for repeating. So the teacher will get to share his knowledge on the time he wishes and the students can either show up at this time to be able to experience it live or they can watch it in recording or by getting the messages later and responding when they wish to, this way also teachers can respond on a message when they have the time. There will be a library connection between the schools where all the open material that the teacher wishes to make public can be accessed and that way the more knowledge the bigger the library and this library will also be connected to the class archive so that recordings and knowledge only accessible to the students in the class will be available for them but not for the ones outside the class. Books can me made digital and only accessible in the classes for reading if the teacher doesn't wish to give the book out freely for download. Or the books can be sold in connection to publishers either in digital format or as a hard copy sent to their addresses and so on, Also other material things needed for the class can be bought or loaned in ways the teacher decides how his business will be run and what is included for the students in the subscribership to be in the class and so on. If there is some knowledge that can only be distributed in person or to be interacting with the class that has to be requirements into the class so students know what they are signing up for and the teacher who runs the business has to have meeting places for this and events set up and routines set up for that kind of activity and the software can be used as a way of managing things that can be done electronically for communication and keeping track of events and economy and so on. The students can interact, chat, hang out, share with other students in the class via the group where everyone is gathered in when they start the class online and get access to this group, and here they can store information on their own profiles and share with others in the class either publically for all to see in the group or privately. Study groups by the students inside the class will also be possible to set up easily.

"I'm trying to free your mind, Neo. But I can only show you the door. You're the one that has to walk through it." ~Morpheus

"Don't teach anyone what to think, teach them to think. there is a big difference..." ~c & a

CHALLENGES WITH LAW AND THE POOR

There will be challenges with the law for a school to educate students at the format of how the current politics is dictating what knowledge is to be obtained, what method it is to obtained by and how long for it to be valid. This has to be respected until the laws are changed to suit the student and the teacher running the business better in the future but until then we have to follow the laws and create a bridge between the old and the new until the old is totally obsolete and the mass public has found it logical to change the laws to facilitate the new system better in the future because of simple logic. This can be done by having established schools use the system for efficiency and economical benefits where the students know what they will get out of choosing this kind of school and that it gives you the necessary papers that the current government require a student to have to go through. What is beneficial with an online school is that you can choose to take classes in other schools from your choosing instead of it all being given in one school that doesn't have all the classes you would wish to go to as a student to add on to the standard requirements. The student can choose if he wishes to take extra classes and so on and there is certain levels you have to complete before you can go onto the next one. And for those that cannot have their kids at home learning via this online school there can be buildings set up for the parents to drop them of at where they get to borrow a computer and extra things that they can't afford to buy that the school owns and runs and they can have hired people to be there for questioning, security, food etc this way for the very poor who live on the streets the homeless would have a teaching center to go to that might be sponsored by the state or by the community or by companies that wish to advertise their products so that even the poorest who live on the streets instead of building homeless shelters you can build these centers and give anyone the possibility to obtain knowledge on their own time and by gaining this knowledge they might be able to get a job or create a job and also get the knowledge of how to survive. Anyone can teach and any student can obtain this knowledge and any paper as proof may be given by the ones running the school as long as it is not approved by the standard of laws the student cannot use this paper as proof if it is not approved by the government but there might be a way for the student that has already obtained the knowledge at other schools and classes not of the standard to go through tests that will give them these official papers needed. But by making this as broad and as free there is possibilities to obtain special knowledge that only a few will choose that is not standard but might be valuable for the students progress in life and will give the teacher that runs the class or the school enough income to teach this and provide a stable income for his family and so on, this is also beneficial for students who want to learn something that is not standardized and normal.

"The only way to deal with an unfree world is to become so absolutely free that your very existence is an act of rebellion." ~Albert Camus

"Until every man is free, we are all slaves" ~Abraham Lincoln: Vampire Hunter

CONCLUSION

This system will make the old system obsolete and it has to be brought in through established systems and business first so that the new gets to prove that it is better then the old, and I think the best way is to set up private schools and introducing it into the current school system as a more efficient tool and a slow transition using this system and the gathering of funds to establish this setup as a first of it's kind. And this way we can promote it and anyone who want to try something new and more cost efficient and get the same amount of knowledge and more obtained can try it and it become a working business at the same time as the software is developed further from the first prototype and since this tool is created as an open source license more will start using it and creating online schools that will add to the library network and to the list of possibilities that in the future will give students a broad specter of options to gain knowledge and it will also create possibilities of teachers to live more freely and more flexible with their lives. And then I say… Help me help you!

"Happiness is when what you think, what you say, and what you do are in harmony." ~Mahatma Gandhi
